WATER CONSERVATION TIPS

Estimated water monthly savings (gallons)

INDOOR CONSERVATION

1.	Replace regular shower heads with low-flow shower	
	heads or flow restrictors.	
	• Low-flow shower heads deliver 2.5 gallons of	500-800
	water per minute and are relatively inexpensive.	
	• Old shower heads use 5 to 7 gallon per minute.	
2.	Taking shorter showers by one to two minutes	700
3.	Taking a bath instead of a shower once a day	
	• 20 gallon savings for each bath taken versus taking	600
	a shower	
4.	A "Navy" shower will save water. Due to the lack of	
	fresh water aboard a ship, sailors are taught to get wet,	
	turn off the water, soap and scrub, and then turn the	
	water back on to rinse.	
5.	Install a low-flow toilet that uses 1.6 gallons of water	
	per flush which could save as much as much as 20% in	
	water consumption as compared to an older toilet	
	which uses 3.5 to 5 gallons per flush.	
6.	One person turning the water off when brushing your	
	teeth and then turning the water on to rinse will save	90
	three gallon per day.	
7.	When washing dishes by hand, use a spray device or	
	short blasts instead of letting water run for rinsing.	250-500
8.	If you use just enough dish detergent to get dishes	
	clean, you can save water in unnecessary rinsing.	50 -150
9.	Try to save the running water that is wasted while	
	waiting for hot water. Collect the colder water in a	100-300
	container and use it for water indoor plants and etc.	

10.	Fixing leaky faucets or pipes joints will save 20 gallon	
	per day. A leaky faucet may simply need a new	600
	washer. Replace toilet handles that stick.	000
11.	Fix or shut-off dripping faucets will save 15 gallon	
11.	each day.	450
12.	Use a partially filled bathroom sink to rinse your razor	130
12.	instead of letting the water run while you shave will	90
	save 3 gallon per day.	70
13.	Use dye tablets or food coloring once a year to check	
13.	for toilet leaks. Remove the toilet tank cover and drip	
	10 drops of food coloring into tank, wait 15 minutes	
	and check for color in the toilet bowl. If you see any	200
	color in your toilet bowl, then you have a leak and it	200
	should be repaired immediately.	
14.	Don't use the toilet as a wastebasket. Using a	
14.	wastebasket instead of the toilet for tissues and other	
	bits of trash will save water	
15.	Keeping a bottle of water in the refrigerator for	
13.	drinking instead of running the tap.	300
16.	When rinsing vegetables, use a filled pan instead of	300
10.		200
17.	running water,	200
1/.	Plan ahead to defrost food by allowing it to thaw in the	
	refrigerator or in the microwave oven instead of letting	
	the water run over the food for thawing.	
	If you are determined to use water to defrect frozen	
	If you are determined to use water to defrost frozen food, then place it in a pan of water to conserve water	100
18.	food, then place it in a pan of water to conserve water. A dishwasher uses the same amount of water whether	100
10.	it is full or just partially full of dishes, so you should	
	delay the washing of dishes until you are able to fill	
	the dishwasher and avoid multiple washings.	
	the dishwasher and avoid multiple washings.	
	Many dishwashers have a water saver cycle and	
	consumers should learn how to use it.	
	consumers should learn now to use it.	

19.	Select the proper water level for laundry since many clothes washers allow control over the amount of	
	water to be used.	
	• A front-load washing machine uses 1/3 less water than a top-loading machine	

Water Savings in Gallons per Month

OUTDOOR CONSERVATION

1.	Watering a lawn in early morning or early	
	evening when there is less evaporation.	
2.	Adjust the lawn sprinkler to avoid watering side	300
	walks, streets and driveways.	
3.	Letting your lawn grow longer in the dry weather	
	will keep your lawn's soil moister and require less	500
	water.	
4.	Fixing leaky faucets or pipes joints will save 20	
	gallon per day. A leaky faucet may simply need	600
	a new washer.	
5.	Fix or shut-off dripping faucets will save 15	
	gallon each day.	450
6.	Consider a drip irrigation system around trees,	
	shrubs, and gardens which permits water to flow	
	slowly to roots. This type of watering	
	encourages strong root systems with less	
	evaporation from sprinkling water	
7.	Mowing lawns higher than normal results in	
	longer leaf surfaces and promotes deeper rooting	
	and shade for the root zone while requiring less	
	water to be healthy. Return mulched clippings to	
	the lawn provides greater shade and assist in	
	reducing the rate of evaporation of soil moisture	
	and surface watering.	
8.	Avoid allowing the water to run while washing a	
	vehicle. Wet the vehicle then turn the water off.	

	Soap the car down using a bucket of soapy water and then turn on the water to rinse.	
9.	Cover your swimming pool will assist in reducing evaporation and reduce the periodic need to top of the pool. A pool cover can cut the loss of evaporating water by 90%.	
10.	Use swimming pool water to irrigate your lawn, plants, trees and shrubs from the back-washing or draining operations.	
11.	Use shut-off nozzles on hoses to completely turn off the water when you are not using it	
12.	Rainwater from roof tops can be collected and delivered by the house gutters to a container(s) for garden use and etc.	

Indoor Water Consumption Facts

Toilets	33%
Washing Machines	22%
Showers	21%
Baths	9%
Kitchen Faucets & Dishwashers	9%
Bathrooms Faucets	6%
	100%
